

The background features a dark blue field with several yellow geometric lines. These lines form various shapes, including a diamond-like shape in the upper left, a large chevron-like shape in the center, and a trapezoidal shape in the lower left. The lines are thin and create a sense of movement and depth.

NEXT

**BRINGING
YOUR IDEAS
TO LIFE.**

DESIGN YOUR NEXT.

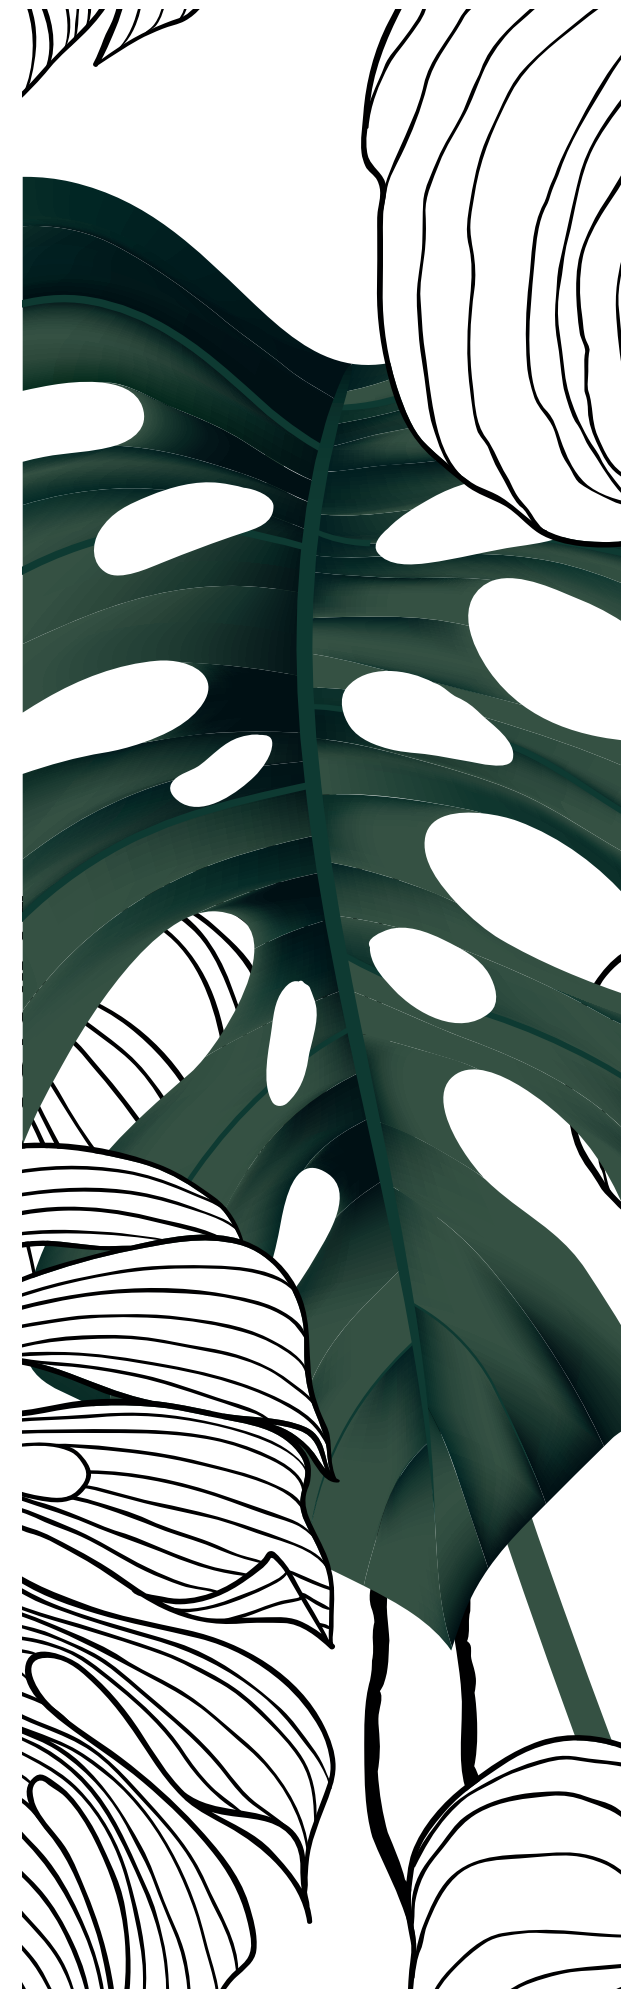

The secret qualities of the materials.

NEXT is the innovative material that focuses on the real protagonist of the exhibition project: the product.

No limits of geometry and dimension: thanks to the full or empty volumes and soft or squared shapes, NEXT represents the perfect design for all brands.

VEP 87 made the continuous innovation and research its own distinguishing feature and, like an alchemist, it understood the best qualities of the materials, ridding them of weak points. Sometimes the very precious characteristics of a material risk to remain unexpressed potentialities. This does not happen if the company has the research skills in its own DNA. VEP 87 created the perfect material to enhance all flooring products, in all situations giving the possibility to customize it connecting the best qualities of the polystyrene (workability, lightness, manageability) and the strength and resistance of a special patented coating layer. The NEXT ideal balance is the result of almost 2 years in R&D and over 550 painting and material tests.

02

NEXT respects the environment and health.

Formaldehyde-free

Free of formaldehyde, a carcinogenic substance; the material is safe for use and reduces the environmental impact.

Lightweight and low CO2 impact

Thanks to its lightweight (about one-tenth compared to competing materials), transportation requires less energy, thus helping to reduce CO2 emissions.

Complete recycling

Production waste is 100% recycled, minimizing waste and promoting efficient use of resources.

100% recycled

It is possible to create displays entirely made from 100% recycled materials.

3

CERAMIC

NEXT displays, designed to enhance ceramic floors and wall coverings, stand out for their extraordinary versatility.

They can be made in any shape, size, or desired number of slots, thanks to the incredible properties of the material used. This allows for creating customized volumes and shapes without the need for complicated assemblies, surpassing the limitations of typical screw-on panels, all without significant cost increases. Next's mission is to offer maximum design freedom, bringing every idea to life.

SPC | LVT PARQUET

NEXT displays for LVT and SPC feature deep grooves that prevent the planks from flexing, eliminating the need for installation panels.

Ideal for wood floors, these displays utilize NEXT material to create an engaging contrast between the display and the product, highlighting the unique features of the flooring.

Vertical display for vinyl floors without installation

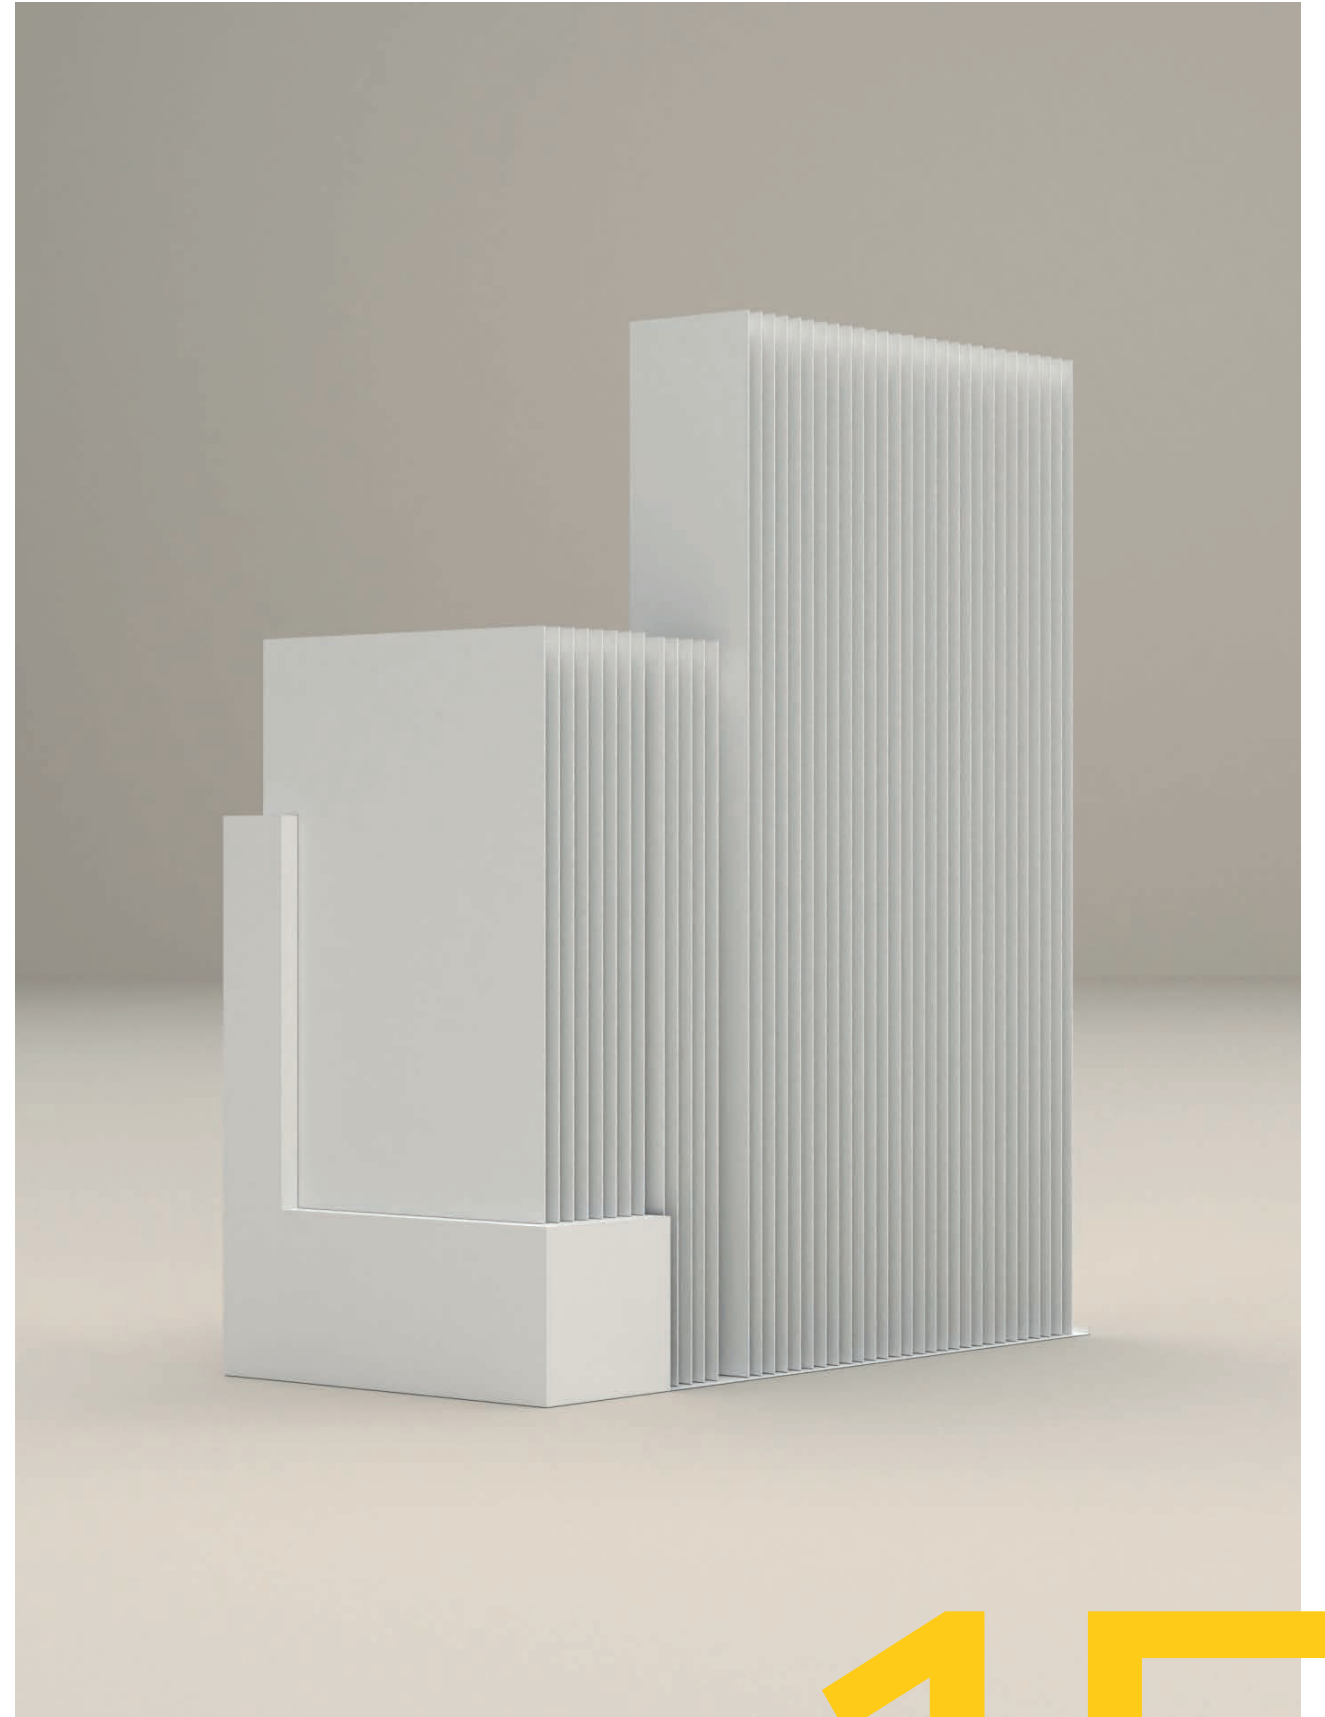

Display for wood-effect floors for center aisles

Display for wood-effect floors without installation for any thickness and format

Display for wood-effect floors without installation for any thickness and format

Marble Heaven

MARBLE QUARTZ

Next displays seamlessly integrate into kitchen furniture stores, allowing for the elegant display of various finishes for countertops. Whether they are totems, floor bases, or practical countertop bases, these displays can enhance precious materials like marble, quartz, and ceramic.

Furthermore, their versatility allows them to be used as supports to be completely covered by slabs, with otherwise unattainable geometric shapes, adding a unique touch of style to the décor.

Multi-format totem for the display of pieces with different thicknesses

Multi-format totem for the display of pieces with different thicknesses, disassemblable for cardboard box transportation

Bifacial vertical countertop base

Mini countertop totem

Inclined countertop base for different thicknesses

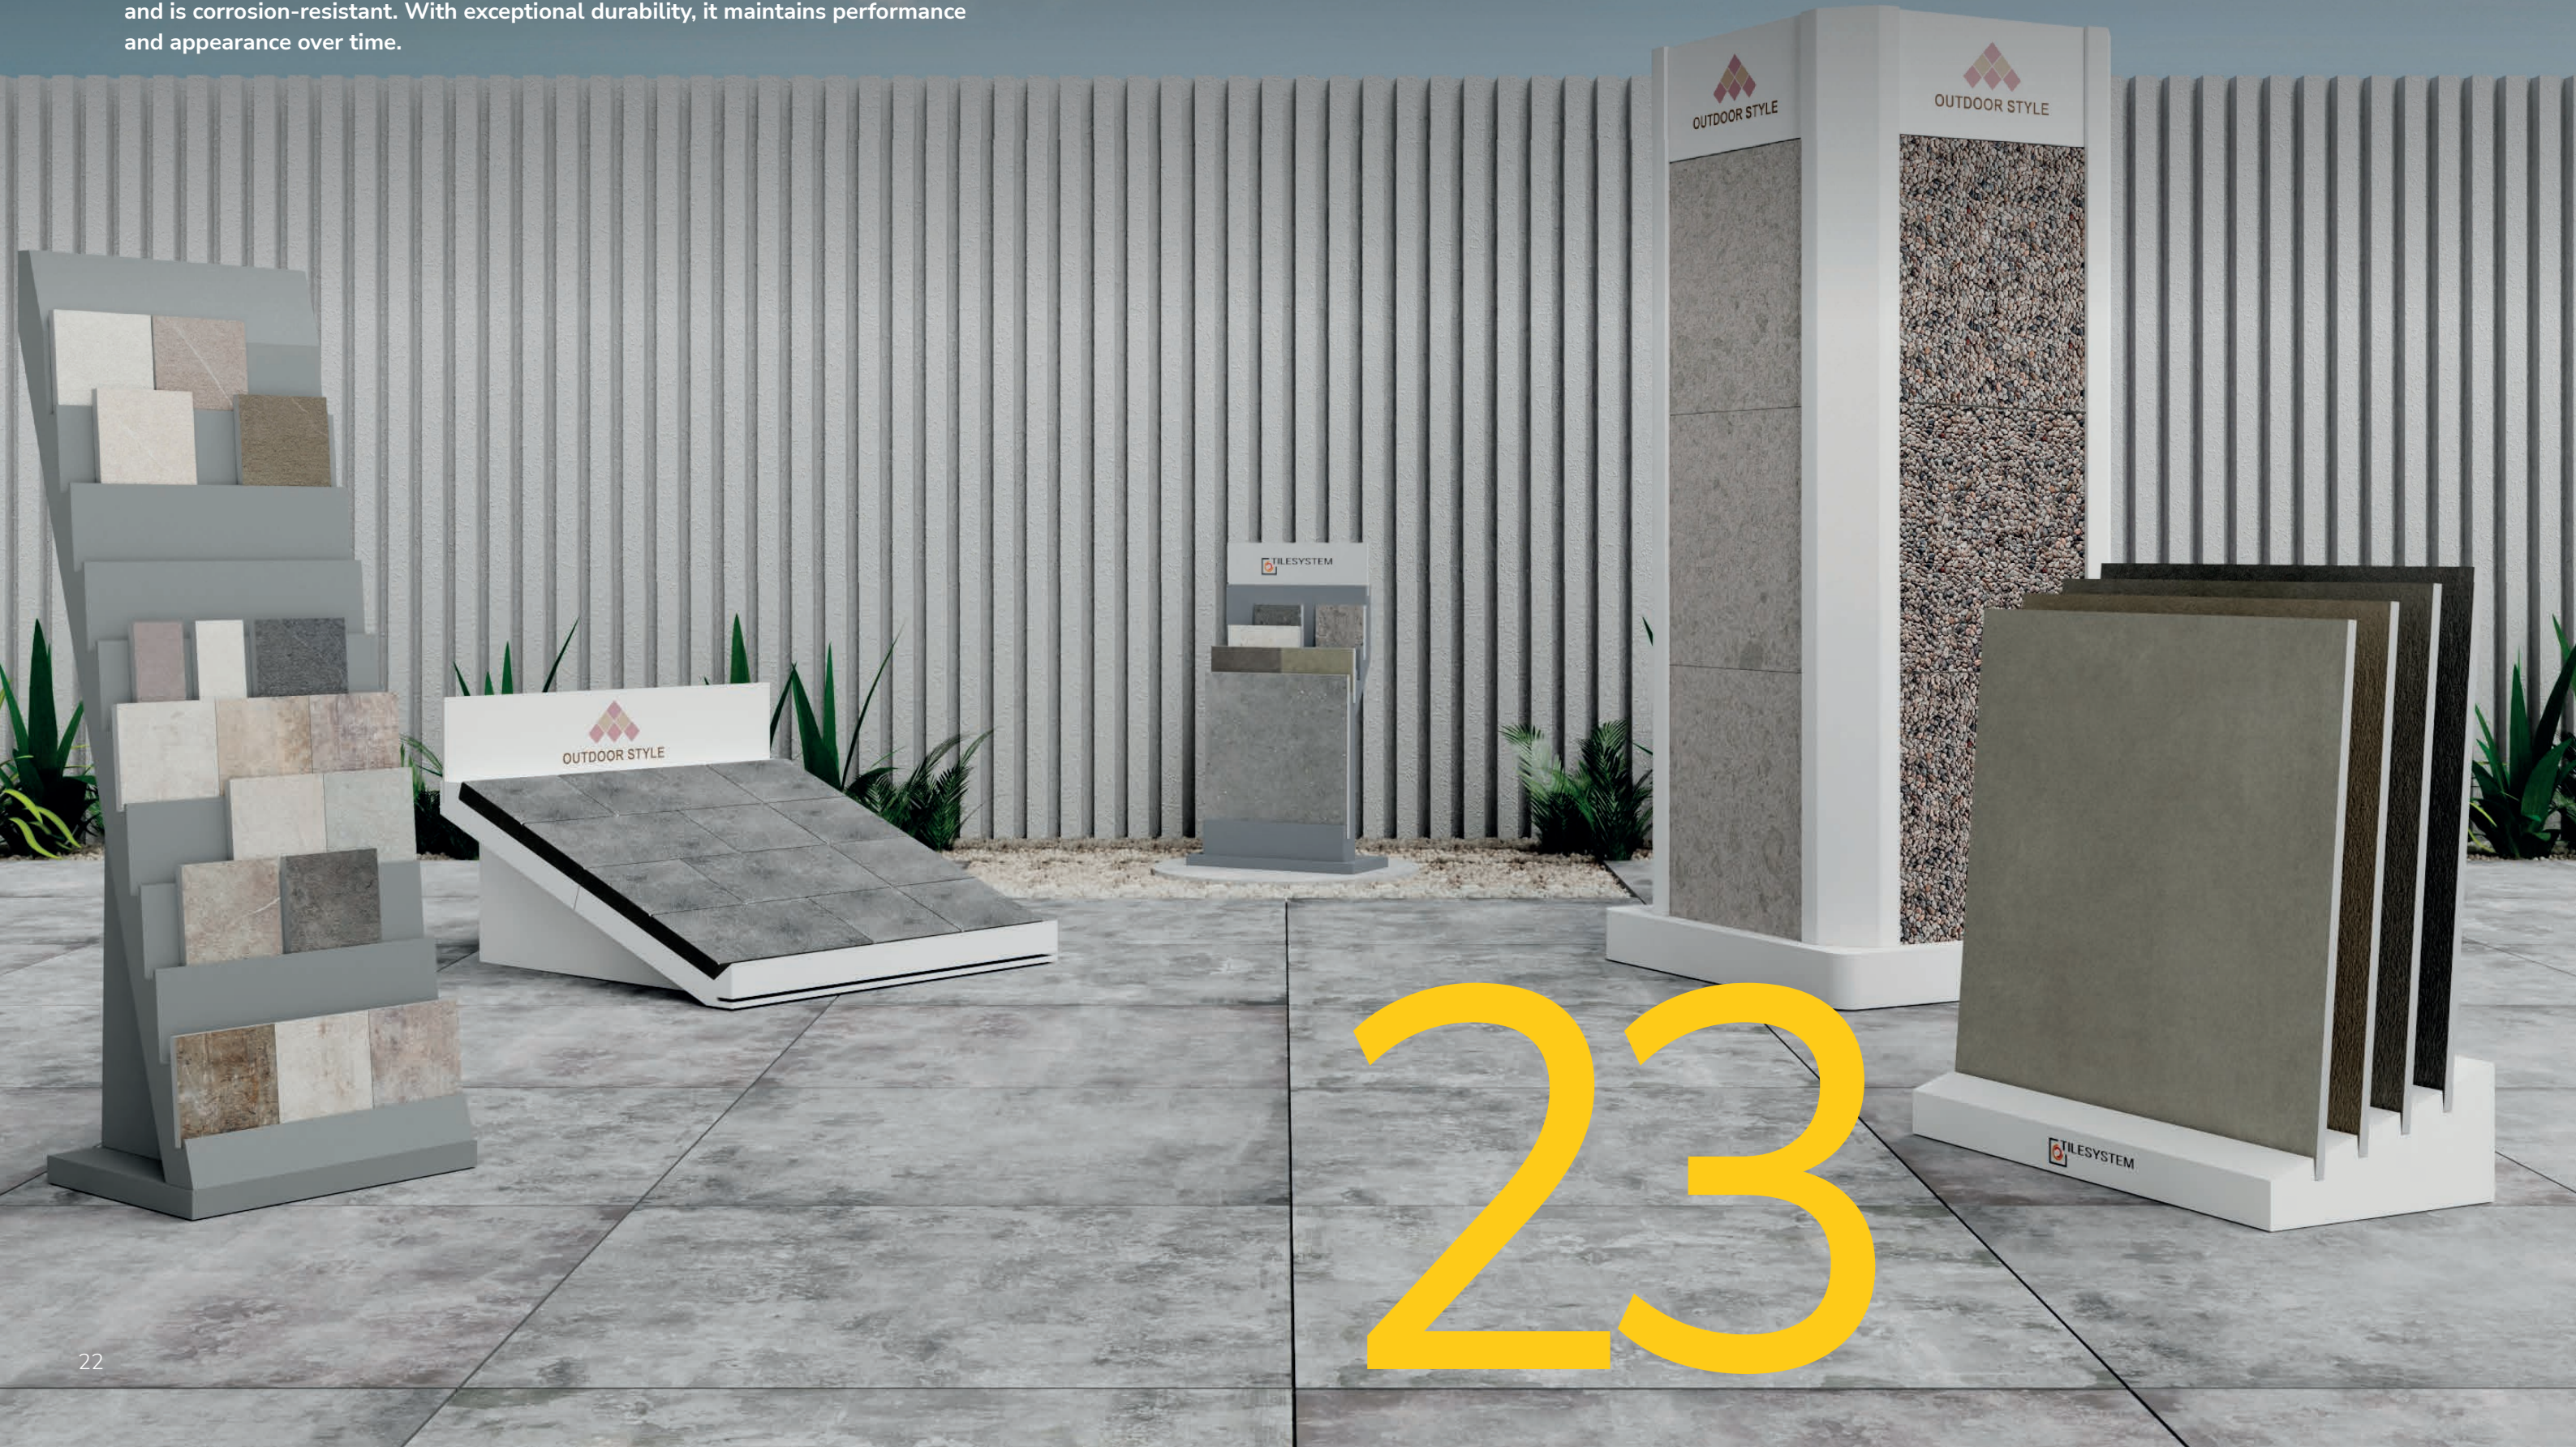

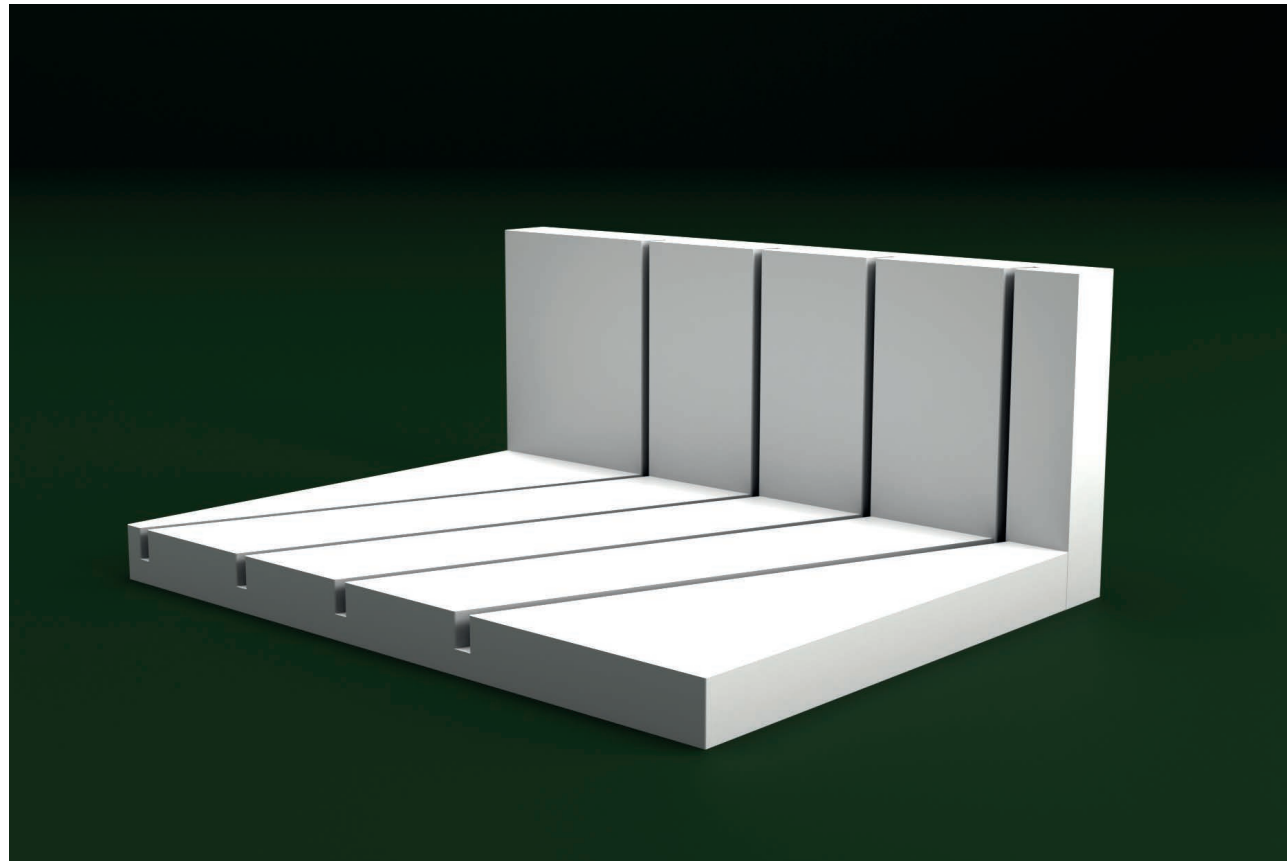

Multi-format totem for different thicknesses made in one piece without assembly

OUTDOOR

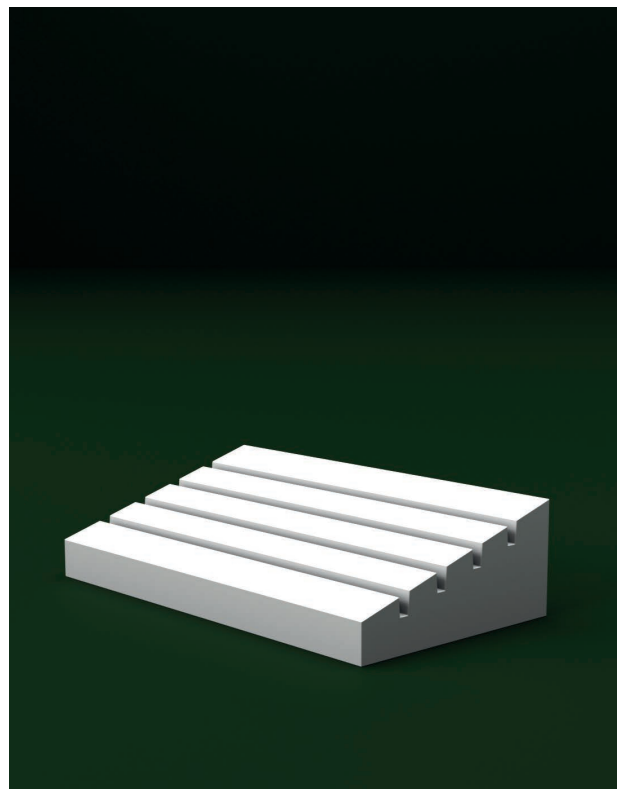

NEXT withstands the elements, facing rain, wind, and temperature changes without altering its structure. It protects against UV rays, blocking harmful sunlight to preserve color and integrity.

It resists saltwater and oxidation, is reliable in both land and sea transportation, and is corrosion-resistant. With exceptional durability, it maintains performance and appearance over time.

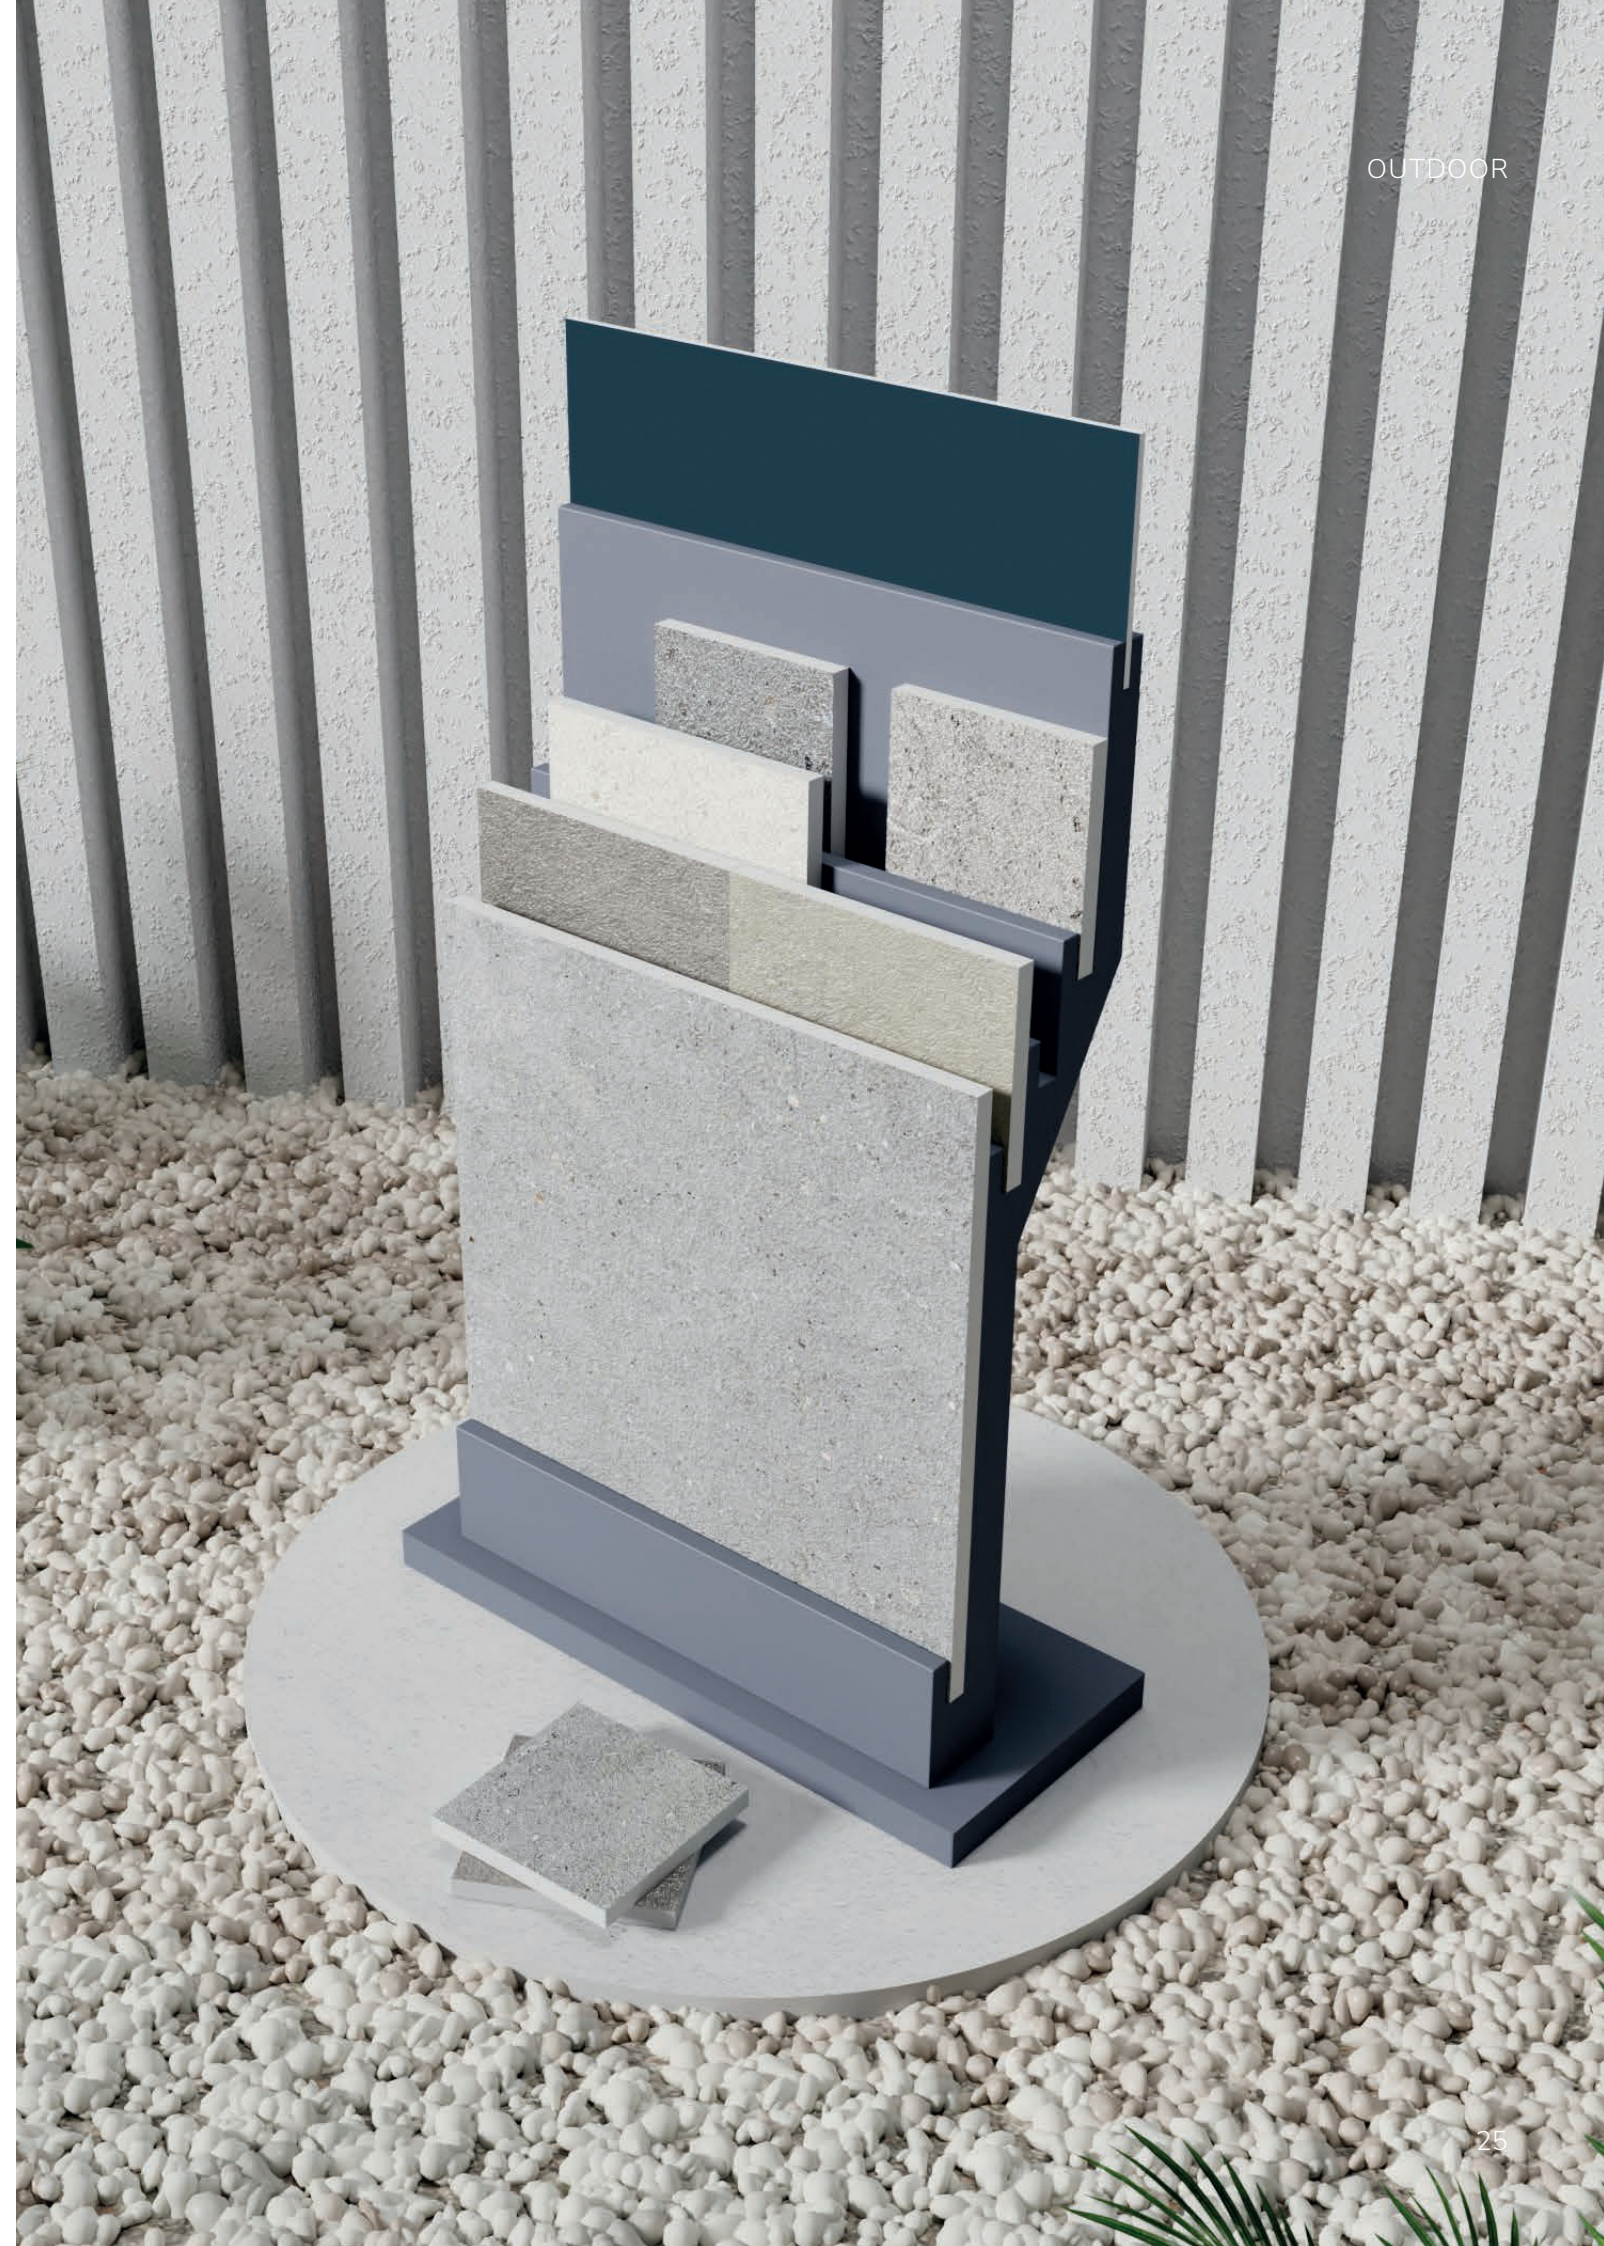

Herringbone base for 2 cm outdoors

Outdoor flooring base assembled vertically, disassemblable for packaging in a cardboard box

**NEXT means “over”, “ahead”, “beyond”.
NEXT is the design vision that does not stop to known borders.
NEXT is the result of almost 2 years of research and investment
of those who know how to transform constraints in opportunities.**

NEXT is thinking beyond.
